

The background features a series of concentric circles in a light gray color, centered on the slide. Overlaid on these circles are several stylized circuit-like lines in a light blue color. These lines are composed of straight segments and small circles at the junctions, resembling a network or data flow diagram. They are positioned in the corners and along the edges of the slide.

ENSEMBLE LEARNING

JENS BAETENS

<https://www.youtube.com/watch?v=Un9zObFjBH0>

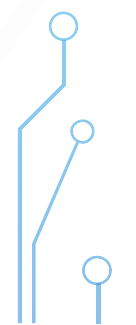

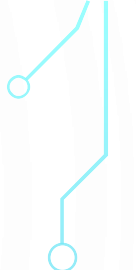

KENMERKEN

Meerdere modellen die samen de correcte output proberen te voorspelen

Gaat zowel voor classificatie als regressie

Meerdere technieken kunnen gecombineerd worden

=> Doel is om een betere voorspelling te bekomen dan de afzonderlijke modellen

STACKING

Decision making model: Majority voting of een nieuwe classifier

Kan op basis van de predicties maar ook op basis van de kansen van elke classifier

BAGGING – BOOTSTRAP AGGREGATING

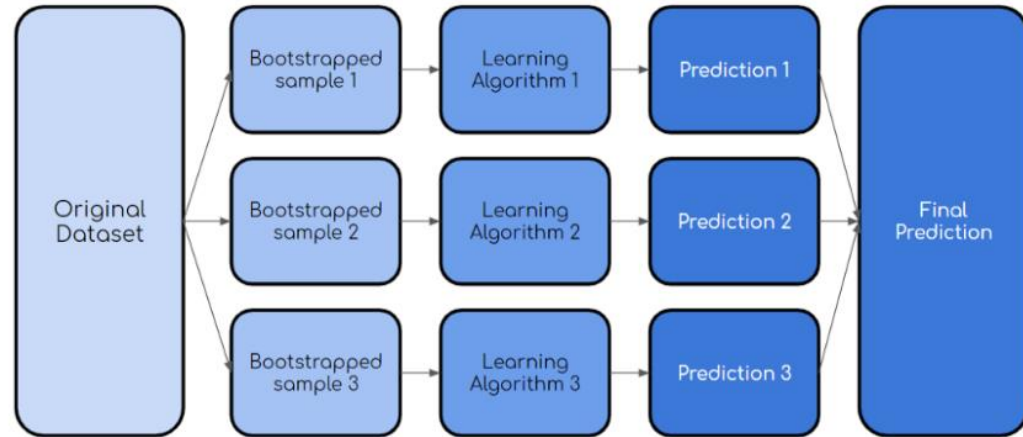

Meerdere modellen van hetzelfde algoritme

Train elk model met deel van de data
(Vaak rond 60%)

Samplen gebeurt met teruglegging

Standaard majority voting

Verminderd overfitting

<https://towardsdatascience.com/ensemble-learning-bagging-and-boosting-explained-in-3-minutes-2e6d2240ae21>

BOOSTING

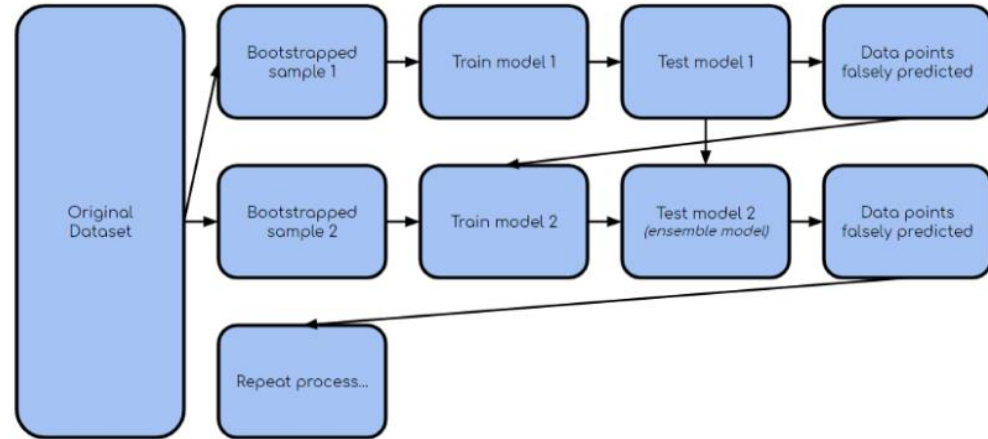

Gelijkaardig aan bagging

Maar training moet sequentieel gebeuren

Misgeclassificeerde samples grotere kans om gebruikt te worden om het volgende model te trainen

Meest gekende algoritme: AdaBoosting

VB: Face detection in camera's

<https://towardsdatascience.com/ensemble-learning-bagging-and-boosting-explained-in-3-minutes-2e6d2240ae21>

XGBOOST

<https://machinelearningmastery.com/gentle-introduction-xgboost-applied-machine-learning/>

Heel snel om te trainen

Haalt goede scores

When should I use XGBoost?

EXTREME GRADIENT BOOSTING WITH XGBOOST

Sergey Fogelson
VP of Analytics, Viacom

<https://www.youtube.com/watch?v=VgDe0gwesrw>

Features of XGBoost

- Regularized boosting (prevents overfitting)
- Can handle missing values automatically
- Parallel processing
- Can cross-validate at each iteration
 - Enables early stopping, finding optimal number of iterations
- Incremental training
- Can plug in your own optimization objectives
- Tree pruning
 - Generally results in deeper, but optimized, trees
